EDUCATION

Drexel University

Philadelphia, PA

Bachelor of Science in Software Engineering (GPA: 3.15)

Anticipated Graduation: June 2027

- Member, Society of Asian Scientists and Engineers, Fall 2022 - Present
- Relevant Coursework: Software Specification and Design 1-2, Discrete Mathematics, Database Management Systems, Data Structures and Algorithms, Systems and Software Architecture

TECHNICAL SKILLS

Languages: Java, Python, C, JavaScript, HTML/CSS, Bash, SQL, LaTeX

Data/Cloud: PySpark, AWS Glue, AWS Lambda, Amazon S3, Informatica, Boomi

Developer Tools: Cursor, Codex, Claude, Linux, Git, GitHub, Vim, IntelliJ, SQL Developer

EXPERIENCE

National Board of Medical Examiners

March 2025 - Present

Data Engineer Intern

Philadelphia, PA

- Built ETL data pipelines using AWS Lambda and Glue to extract, clean, and load Salesforce and other business data into Amazon S3
- Prepared and transformed data for visual dashboards used by internal business teams and external customers
- Reduced Amazon S3 storage usage by 6%, lowering storage costs by 7% through data cleanup and optimization
- Utilized GitHub for AWS CDK development and deployment workflows, supporting version control, code review, and reliable infrastructure updates

PROJECTS

Game Desktop Application | *Python*

Software Developer

- Collaborated with a team of three developers to design and deploy multiple games within a custom application framework, applying Agile principles to guide development and iterative improvements
- Led Scrum adoption by overseeing team progress, running daily stand-ups, managing bi-weekly sprints, and facilitating retrospectives to improve delivery efficiency
- Optimized GitLab version control workflows, enhancing team collaboration and ensuring code quality through structured reviews

Bank Management Simulator | *Java*

Software Developer

- Built a Bank Management System with Test-Driven Development (TDD) to ensure a robust and reliable codebase
- Implemented CI/CD pipelines and mutation testing in GitLab, reducing code mutations by 90% and improving deployment quality
- Designed database schema and system architecture to support secure, scalable banking operations

Personal Portfolio Website | *HTML/CSS, JavaScript*

Web Developer

- Built a personal portfolio website with HTML, CSS, and JavaScript to showcase projects and skills
- Utilized GitHub Pages to host and maintain the site for seamless deployment and version control
- Implemented interactive UI components and responsive design to enhance visual appeal and user experience

NutriTrack Nutrition Application | *PostgreSQL*

Data Analyst

- Built a full-stack nutrition tracking web app using Supabase Postgres, Supabase Auth, and a GitHub Pages frontend to log calories, macros, foods, and body weight
- Implemented data access controls so that select logs can be viewed and only logged-in users can edit their own data
- Designed SQL tables with user ownership, date indexing, and Row Level Security policies to protect user data
